CLIENT SETUP: Instructions for reviewers

Reviewer (client) setup guide (Tailscale + browser access)

Quick start

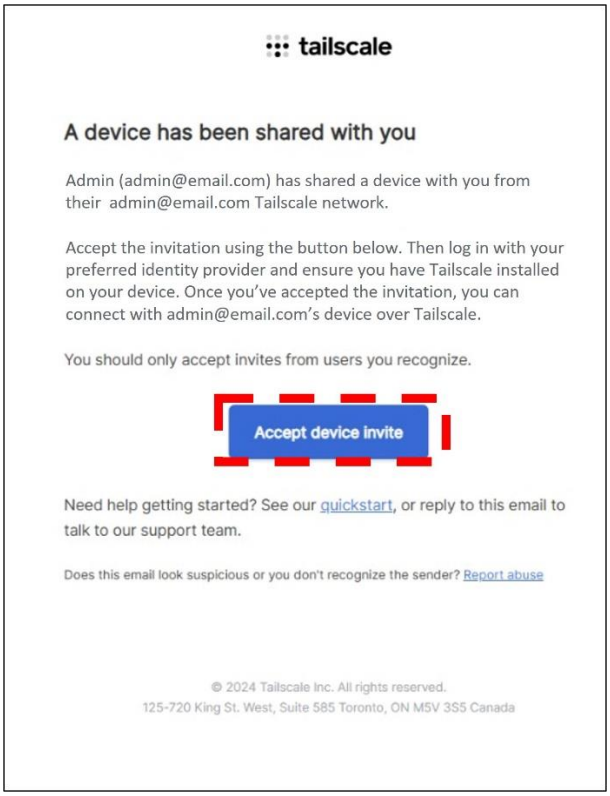
This guide is for **reviewers** (clients). You only need:

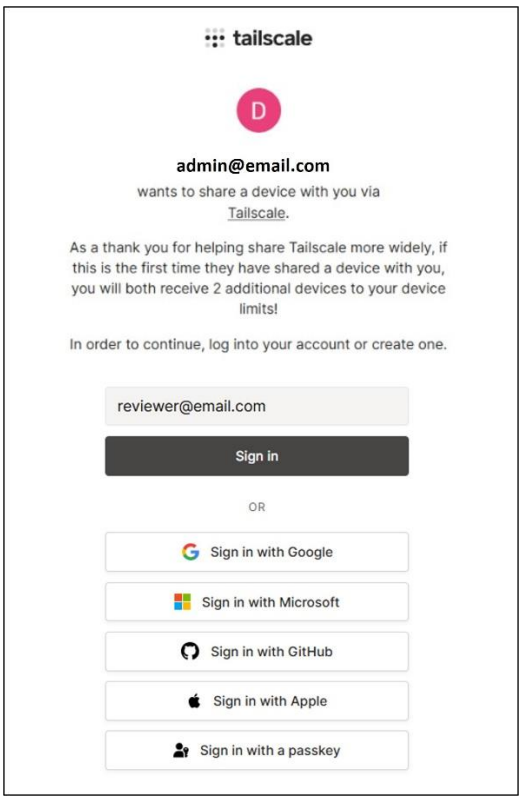
- **Tailscale** installed and connected
- A **browser** to open the server URL

---

1) Ask the server admin to invite you

1. **Send the server admin the email address** you use (or will use) to log into Tailscale.
   - If you use an **institutional email** and the admin's tailnet is tied to a different identity provider (for example, a personal email or a different institutional email), you may get an **Error 403** when trying to join. If that happens, send the admin a **personal email** (Gmail, Outlook, etc.) instead.
2. **Wait for the invitation** email from Tailscale.
3. **Accept the invitation** and **log into Tailscale** using that same email account.

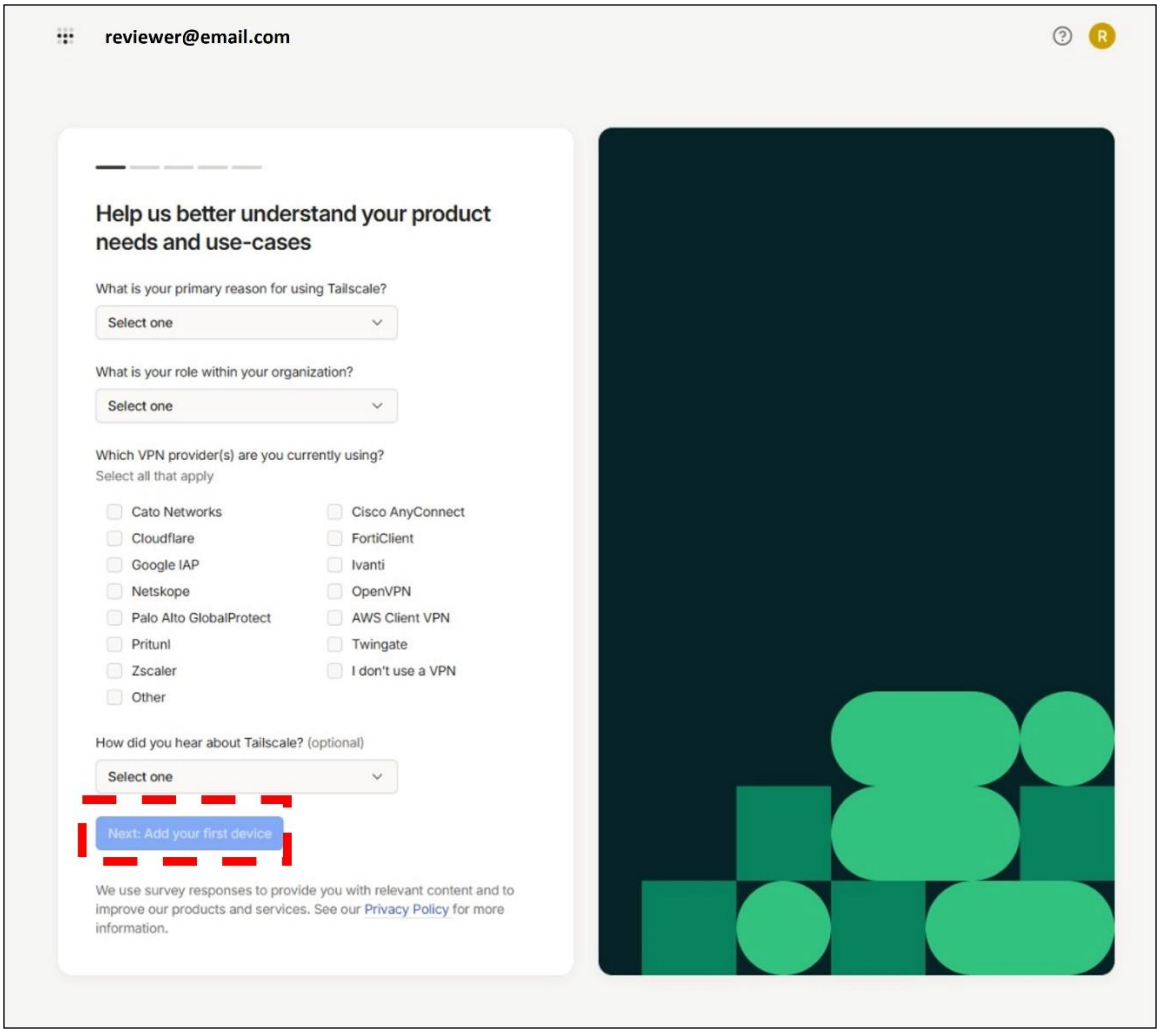


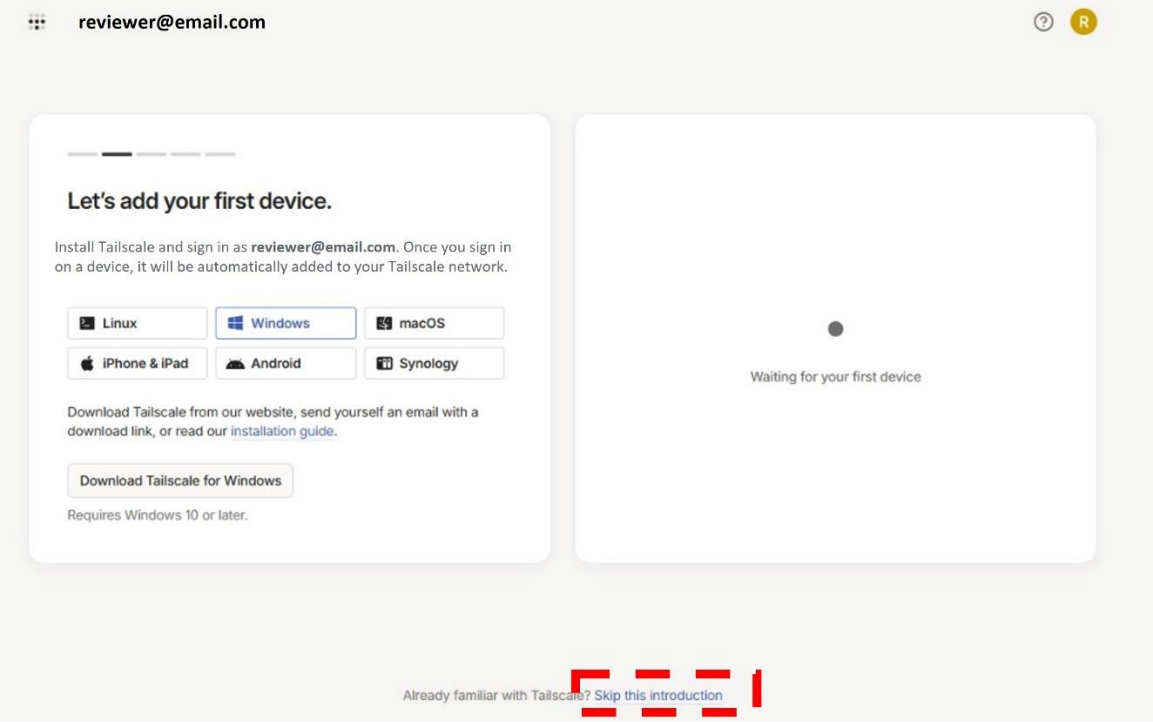


---

2) Complete the form

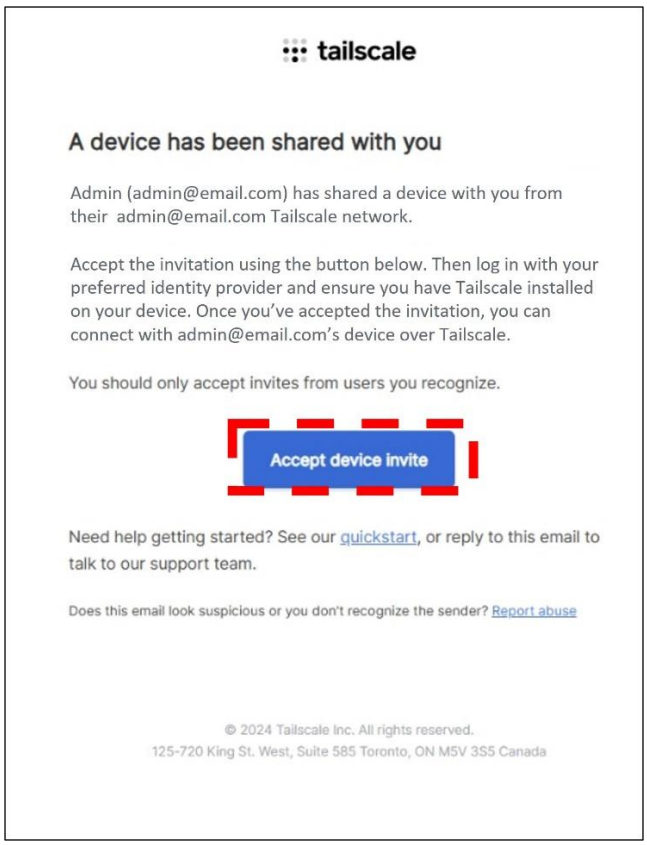
1. Complete the form and click "**Next: Add your first device**". You'll be redirected to a new page: click "**Skip this introduction.**"

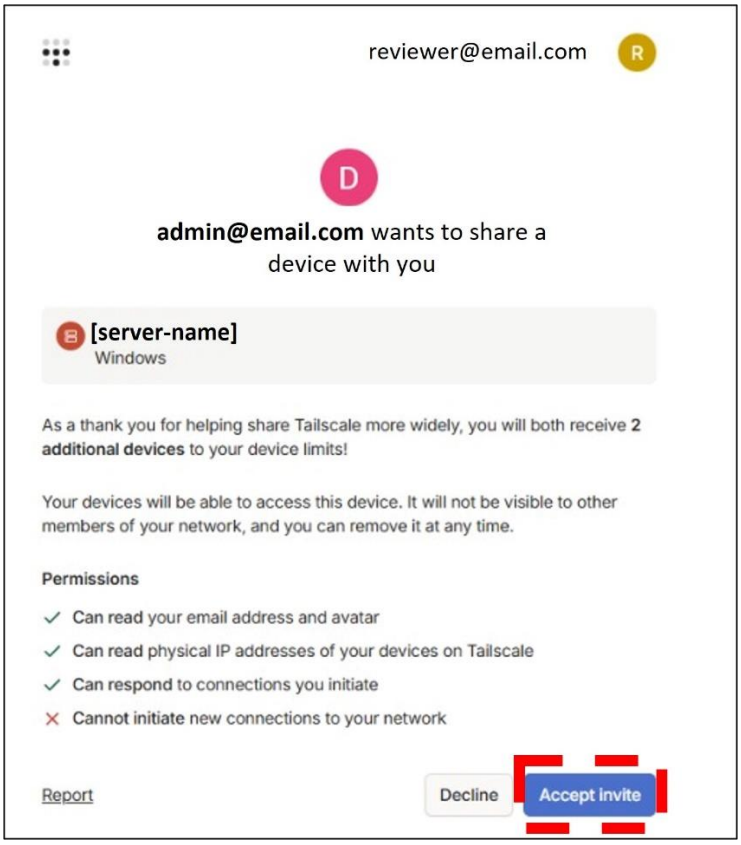




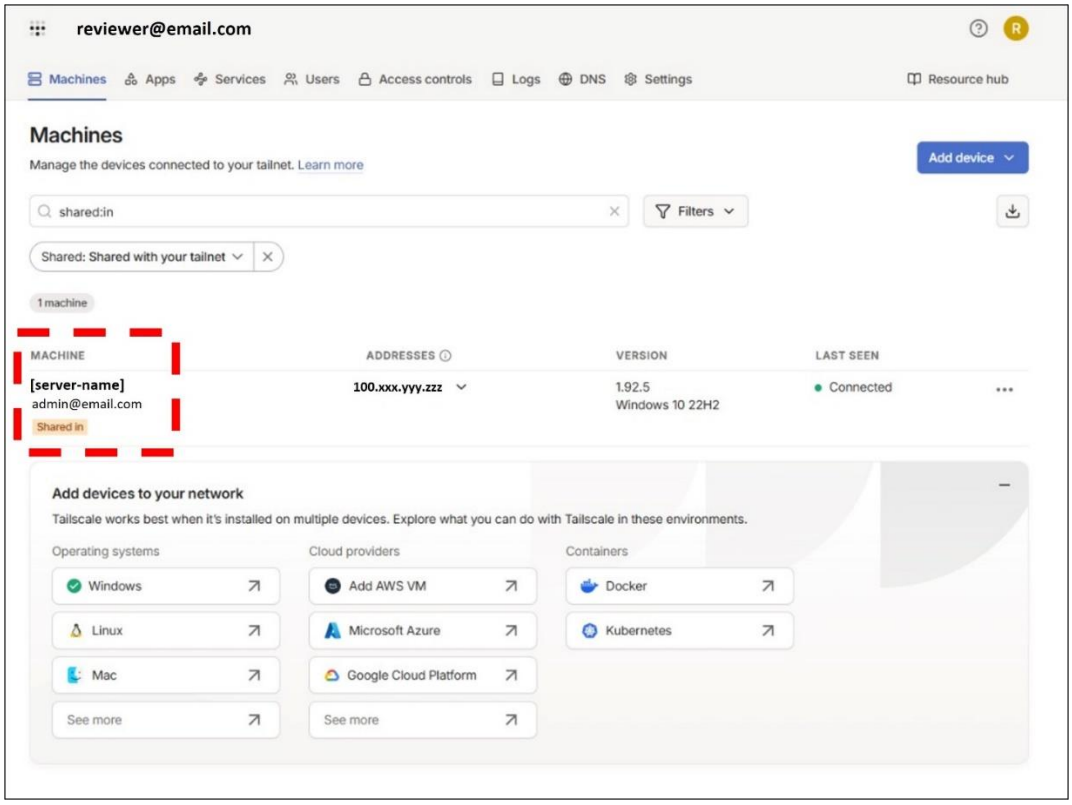
3) Accept device invite (again)

1. Go back to the invitation email and click "**Accept device invite**" again. You'll be redirected to a page where you must click "**Accept invite.**"





2. After clicking "**Accept invite**", you'll be redirected to a new page. **Refresh that page** and confirm you can see the **server name** along with the **server admin email**.

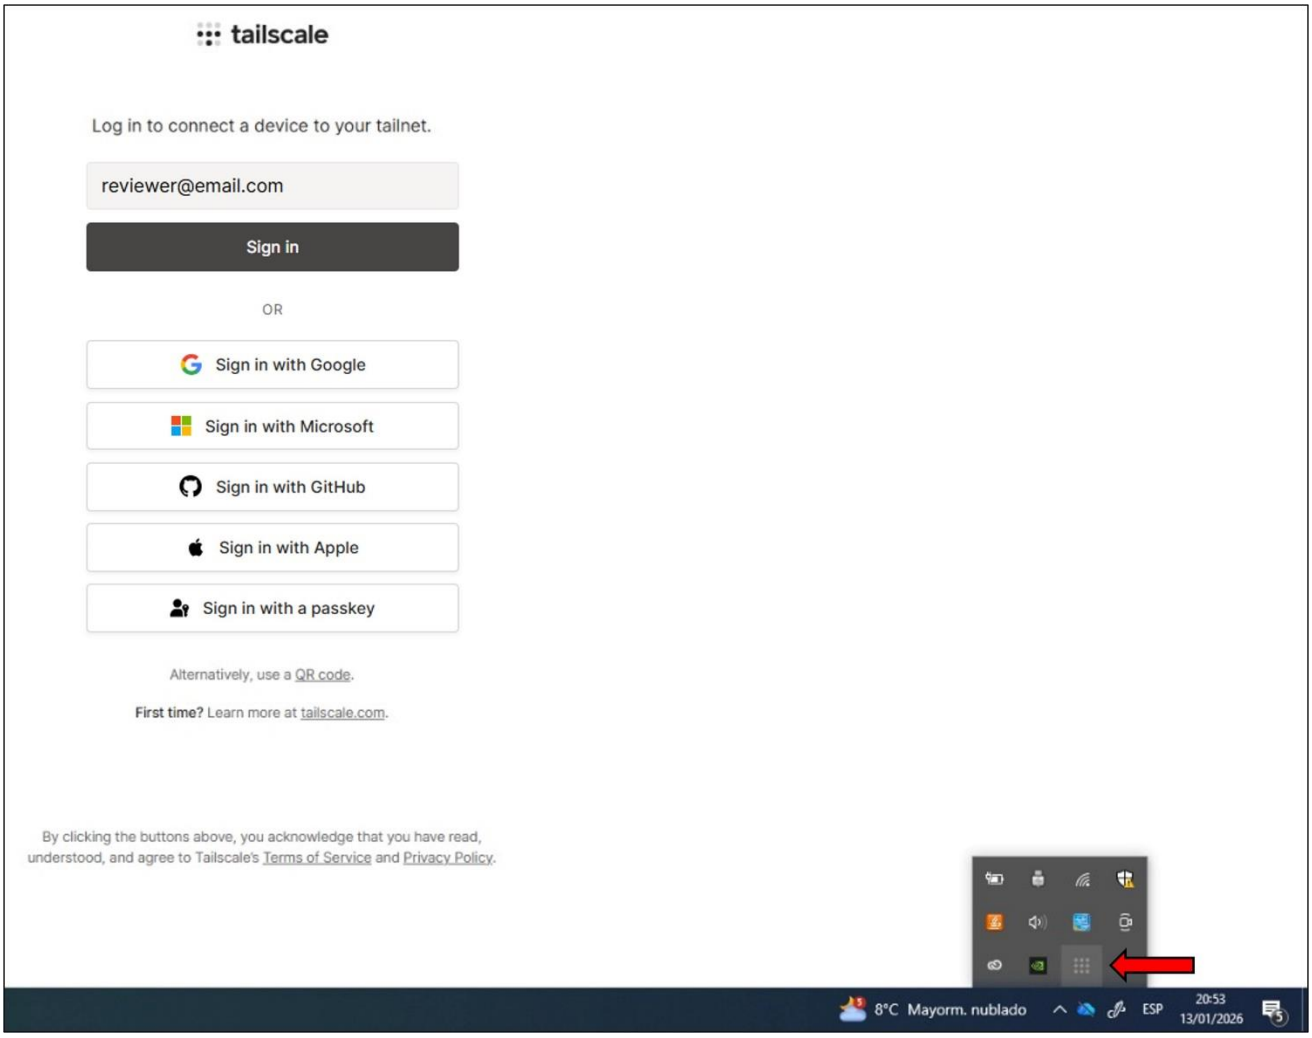


4) Install Tailscale

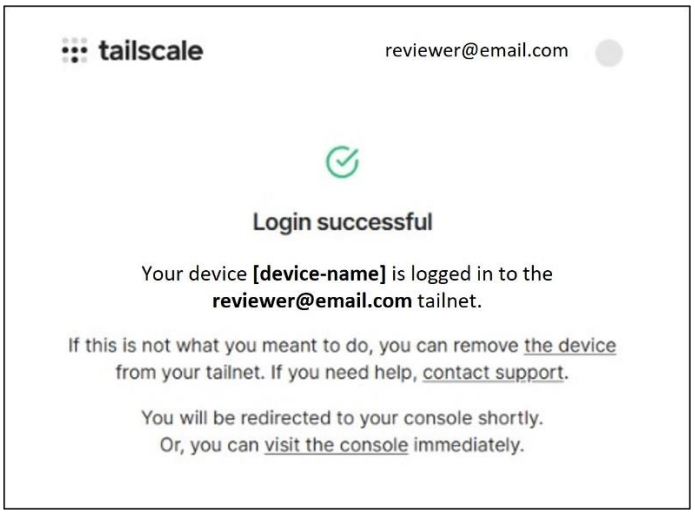
1. Download Tailscale:
    - https://tailscale.com/download
2. Install it like any normal application.

5) Log in and connect your device

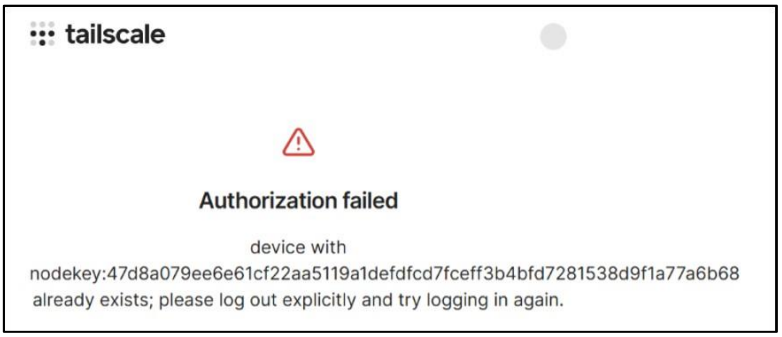
1. Click on the **Tailscale** icon in your **system tray/taskbar** (Windows) or **menu bar** (macOS). You'll be taken to the sign-in page. **Log in** with your email address.



2. Connect your device by clicking "**Connect**." You should see a confirmation message indicating the connection was successful (**do not close this page yet**).



- If you get this **error** after clicking **Connect**:



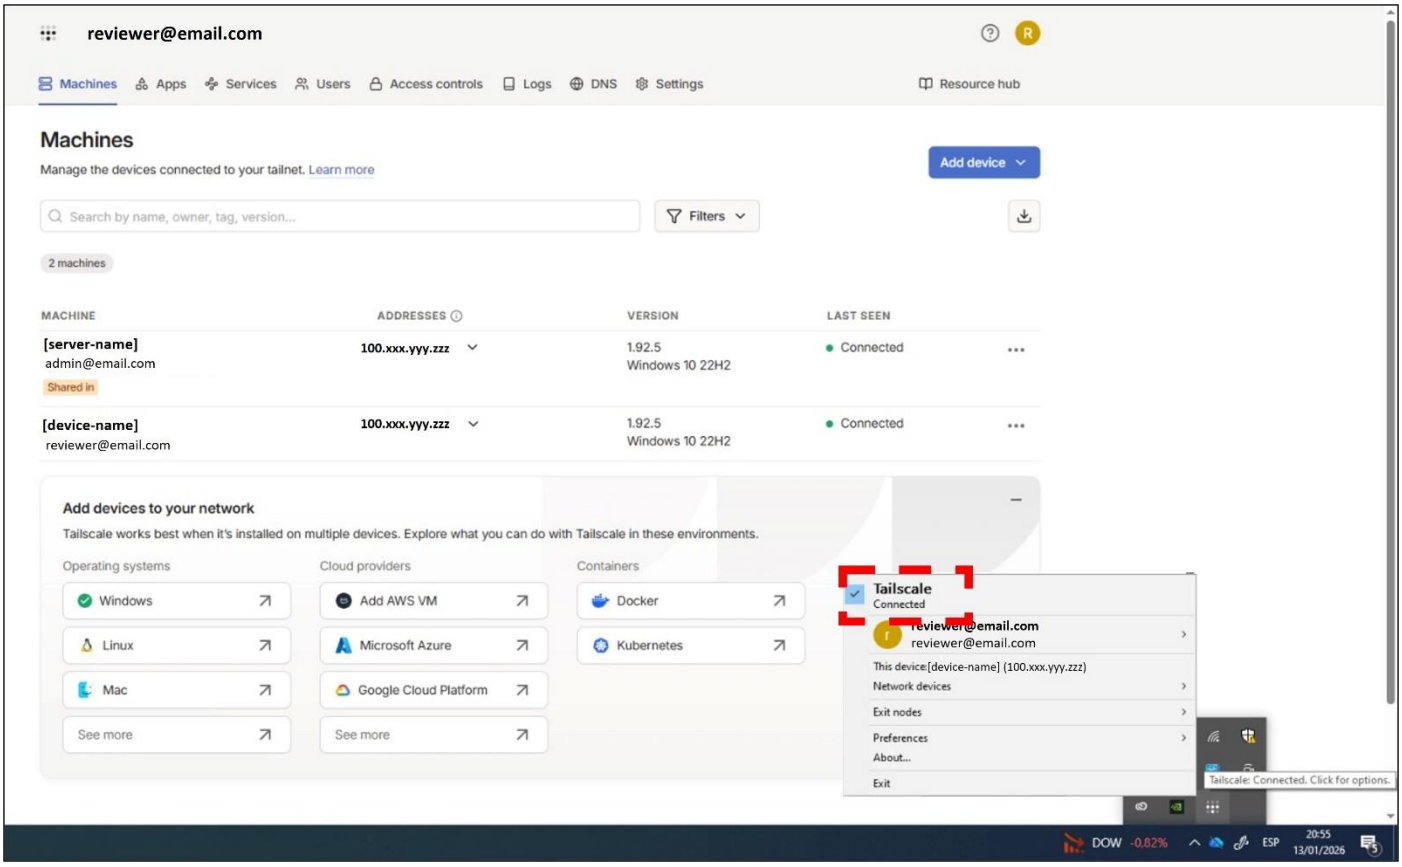
- Open the terminal of your computer (in **Windows: PowerShell**; **macOS/Linux**: **Terminal**), and type these commands:

  - Note: to open the PowerShell terminal in Windows:
    a. Right-click the **Windows** icon in the taskbar
    b. Click **Search**
    c. Type **Powershell**
    d. Open **Windows PowerShell**
- After running those commands, go back to **step 1** of this section (**5) Log in and connect your device**) and try it again.

---

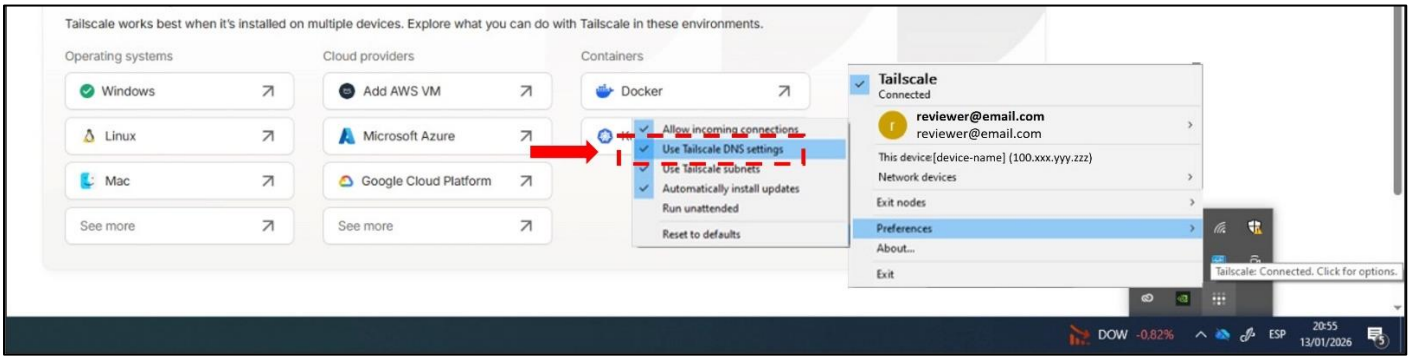
6) Check everything is working

1. After a few seconds, you'll be redirected to another page. You should now see two devices: the **server device** (with the server admin email) and **your device** (with your email). You can also click the **Tailscale** icon again to confirm it shows "**Connected**."



7) Enable "Use Tailscale DNS settings"

1. In the Tailscale app "**Preferences**":
    - Make sure that **Use Tailscale DNS settings** is enabled (wording can vary slightly by OS).



8) Open the server URL

1. The server admin will send you a URL similar to:

https://<tailnet-name>.<tailnet-id>.ts.net
